
California Proposition 65 compliance statement

California Proposition 65, also known as the Safe Drinking Water and Toxic Enforcement Act of 1986, requires businesses to provide warnings to Californians about significant exposures to chemicals that cause cancer, birth defects, or other reproductive harm.

IKT Electronics Ltd is committed to ensuring compliance with California Proposition 65 regulations. For us as a contract electronics manufacturer, this means providing information to our customers - OEMs if our products contain any of the chemicals listed by the state of California as being known to cause cancer, birth defects, or other reproductive harm.

IKT Electronics Ltd is a supplier of custom populated printed circuit boards and cable-harness products that are not intended as consumer products. Each part is made to order and to the design and material specifications provided by the customer. This makes individual analysis of the products for Prop 65 substance content impossible.

The PCBAs manufactured by us may contain small amounts of chemicals listed in Prop 65. The most prevalent is metallic nickel, which is used as a plating aid for gold adhesion in bare circuit boards. Also lead can be found in HAL Pb PCB surface and in subsequent solder joints (if the OEM-customer requires option using lead-containing manufacturing). Some wires that are used in the manufacturing and are required by OEM-customer's design may also contain Prop 65 substances.

IKT Electronics Ltd believes that the electronic parts manufactured and supplied by us do not bring exposure risk through ingestion, inhalation, or absorption through the skin. Nevertheless, we expect customer's operators to always wear appropriate personal protective equipment, including gloves, when handling the parts until they are fully enclosed in a finished product. Once enclosed, we believe, there should be no significant opportunity for exposure or release of the substances contained in products under normal or reasonably foreseeable usage. However, it's up to our customer to evaluate the risks and decide whether to apply warning for the finished product.

Our dedication to compliance extends throughout our supply chain, and we work closely with our suppliers to ensure our and our customers' awareness of the materials and components content used in our products and their compliance to Proposition 65 standards.
